

This pivot opening door shower enclosure has semi-framed front panels consisting of door and where necessary an inline panel. The semi-frameless panels use heat-toughened glass while the framed panels use safety glass.

The frame is aluminium finish in anodised or powder coated colours to match your bathroom decor. The door closes onto an aluminium jamb and opens by swinging out, thus preventing water escaping around the edge of the door. The sill has a lip to minimize the amount of water splashing out under the door. The pivot and fittings will never rust or corrode.

**Standard Semi Framed Showerscreen**
